This is more data than most of us can shake a stick at, but most of it is fairly benign in terms of its expected impact on bonds. Indeed, trading levels are not far from pre data levels, but if there's a bias, it's toward better buying.

10s are now down 2bps at 4.309 and MBS are up 3 ticks (.09).

Picking a winner among this data is tough. First off, we can throw out GDP and PCE as it is from Q1 (i.e. stale). That leaves claims and durable goods. Claims was a mixed bag with weekly initial claims falling and continued claims rising. Durable goods was also mixed with a modestly stronger headline, but a much weaker core. The latter is arguably the biggest outlier among this morning's relevant line items and the easiest argument for the key driver of these modest gains.
