Month-End Volatility, But No Bearing on Bigger Picture

MBS Recap | Matthew Graham | 4:29 PM

It was a deceptively interesting Friday for the bond market with month-end trading creating volatility that seemed relevant at first glance. Those trades easily overshadowed the calmer market movement seen in the morning hours following the PCE data, but that was a very low bar. In the grand scheme of month-end trading days (especially those that fall on the Friday before a 3 day weekend), today's volatility was average. Next week holds far more promise to shape the debate over a 25 vs 50bp Fed rate cut and, consequently, the next big move for the bond market.

Lock / Float Considerations

- Potential volatility exists on every trading day between now and the jobs report on Friday 9/6. Given that these levels have been well established, there's no directional implication from short term **technicals**. Apart from some compulsory "new month" trading on Tuesday, it should be econ data that sets the tone going forward.
