Modest Resistance, But No Big Bad Correction

MBS Recap | Matthew Graham | 4:33 PM

Unless Friday's Consumer Sentiment data manages to surprise in some completely unprecedented way, bonds have made it through the week of economic reports and Treasury auctions without looking any worse for the wear. Thursday saw a small amount of ground conceded, but not enough to move yields back up in to last week's range. The initial reaction to the 8:30am data was actually slightly positive for bonds. Selling came later, suggesting sellers had other motivations. The recovery in the afternoon was concentrated in the shorter end of the yield curve following an article by WSJ's Timiraos discussing a 25bp vs 50bp Fed rate cut.

Lock / Float Considerations

- With bonds weathering this week's data and Treasury auction in unchanged territory, risk-tolerant floaters have yet to see the sort of big bad movement that would compel them to take chips off the table. The exception would be for those who've floated and feel like they're pressing their luck. Risk averse clients are always compelled by the lowest rates in more than a year, even if the trend has been friendly. Indeed, it is worth considering that even friendly trends occasionally meet technical resistance in order to reset and continue. The more we improve, the more one might be concerned about seeing such a consolidation.
