

Refi Booms, Loan Limits, and Mortgage Rate Misdirection

'Tis the season for things to be something other than what they appear to be, apparently. Lenders are talking about new loan limits, but they haven't officially changed. News stories are saying rates went lower this week, but they're higher. And there's even talk of a big refi boom, but as you may have guessed, that's also not exactly right.

Rates.

Rates continued to move slightly higher (yes, higher), while remaining close enough to long-term lows. This chart of 10yr Treasury yields (a proxy for longer-term rates like mortgages) does a good job of capturing all of the positive momentum seen in recent months as well as the mild correction that began after last week's Fed rate cut.

Things look even milder if we focus on mortgage rates. In fact, one measure of mortgage rates (Freddie Mac's weekly survey) is so mild that it actually went LOWER this week.

30yr Fixed Mortgage Rate Indices
 --Freddie Mac Weekly Survey
 --MND.News Actual Daily Avg.

Sadly, Freddie's numbers don't align with reality this week. We are normally able to use the objective daily numbers from MND to reconcile such discrepancies, but it's not possible in this case. If you want a deeper dive on this phenomenon, here you go: [Mortgage Rates are 100% NOT Lower This Week.](#)

Loan Limits and Home Prices

Other misdirection plays are much easier to explain. For instance, you may see some lenders advertising new conforming loan limits that are near, or over \$800k. Official conforming loan limits are announced at the very end of

It seems like a safe enough bet that the blue line will still be well above zero 2 months from now. To understand how close some of these lenders might be with their guesses, we can combine what we already know about the expanded quarterly data with the trends that have emerged in month to month price data. Here's the month to month chart:

In other words, price appreciation has averaged less than 1/2 of 1% over the past 3 months. Moreover, two of the 3 highest months will fall out of the annual calculation before the loan limits are determined. If the same pace continues, and if we apply it to the quarterly data that's already available, the new conforming loan limit would be \$800,950. Several lenders are already higher than that, but expect them to pull back to the official number when it's released in 2 months.

Refi Boom

Is there or will there be a refi boom? The answer depends on your frame of reference. We can assure you that this chart of the Mortgage Bankers Associations refinance index is accurate:

In other words, there's been a massive surge up from utterly depressed levels of refi activity such that we're now in line with what had previously been considered the doldrums. Things can certainly pick up from here although certainly not to historic highs any time this decade. Those highs were marked by opportunities for every eligible mortgage holder to save money by refinancing. Now that a large proportion of homeowners has rates in the 2s and 3

Monthly Core PCE Inflation

As for the increased focus on the labor market, next Friday brings the all-important Employment Situation (aka "the jobs report"). It has more power than any other piece of monthly economic data to give rates a push, for better or worse.
