

The Mortgage Bankers Association (MBA) released the latest mortgage application data this week showing a modest 1.6% decrease from the previous week. A slight uptick in purchase applications was more than offset by a downtick in refi applications, but both remain in solid territory relative to the prevailing range and interest rate environments.

MBA Purchase Index

The chart displays the MBA Purchase Index over time. The y-axis represents the index value, ranging from 120 to 170. The x-axis shows the timeline from 2024 to 2025. A horizontal dashed line is drawn at the 158.20 level. The index starts around 140 in early 2024, peaks at approximately 175 in early 2024, and then fluctuates, ending at 158.20 in early 2025.

Date	MBA Purchase Index
Early 2024	~140
Mid 2024	~175
Early 2025	158.20

The most optimistic way to approach these numbers would be to say that purchase demand looks to have bottomed out in the bigger picture and is now waiting for motivation to bounce back. When that happens, no one is under much of an illusion that volume would go back to the highs from a few years ago, but even recapturing a fraction of that range would make for a meaningfully more active housing market.

Refinance demand, as always, is very closely tied to interest rate volatility. Last week's rates moved higher and were near the highest levels in more than a month at one point. As such, it's no surprise to see a bit of a slide in the refi index. If anything, it's refreshing to see how resilient the numbers have been.

While we are no great fans of predicting the future, there's a strong possibility that next week's refi numbers will be noticeably higher. That's not hard to imagine given that rates fell to the lowest levels since October by the end of the week.
