## Selling Spree Continues, But Gently

MBS Recap | Matthew Graham | 4:29 PM

Bonds were focused on this morning's ISM Services Index with some traders waiting to see more evidence of economic fallout from tariff-related uncertainty. Instead, the index moved slightly higher and was rather uneventful by the time all sub-components were considered. Not enough fuel there for bond bulls, so the bears kept the 3 day selling spree going, ultimately getting 10yr yields back over the 4.34 technical level that got so much play time in March.

## Lock / Float Considerations

- Bonds continued into weaker territory to start the new week and if data is any indication, it's not yet time to bank on a big data-driven rally. Conversely, there's enough potential fallout from tariff-related uncertainty to keep bond bears from getting too carried away. Near-term momentum is just as likely to

be driven by Treasury auctions and Fed-speak as anything else. In the bigger picture, it's easier to make a case for a broadly sideways range as opposed to one that is trending convincingly in either direction.
