Some Headwinds Ahead of Powell's Jackson Hole Speech

MBS Recap | Matthew Graham | 1:25 PM

Thursday brought the week's only relevant econ data with 3 occasional market movers on tap. Their results were mixed, but the important development was that the inflation components of the Philly Fed and S&P PMI data agreed that price pressures are alive and well. This made for a weaker start during the AM hours and that weakness was exacerbated by comments from Fed's Hammack (who said current data doesn't justify a September rate cut). A super strong 30yr TIPS auction at 1pm helped push back just a bit (which is quite remarkable as this essentially never has an impact). In the bigger picture, bonds could still be classified as drifting sideways to slightly weaker in a narrow range. Friday morning's speech from Fed Chair Powell isn't guaranteed to cause volatility, but it's the week's only true top-tier event in terms of volatility.

Power isn't guaranteed to cause volatility, but this week's top-tier event in terms of volatility potential.

Lock / Float Considerations

- Modest, incidental, summertime drift in bonds without much on the calendar to cause volatility concerns apart from Friday's Powell appearance at Jackson Hole. There's little to be done with respect to lock/float decisions at times like this. Risk tolerant clients will wait for a bigger move to inform their decisions. Risk averse clients are happy to lock with rates still near long-term lows. And those in between are well served by flipping coins.
