.346 is just about as high as Core CPI could be without printing at 0.4 vs the 0.3 expectation. Headline CPI was 0.382 vs a 0.3 expectation. If that's all we knew this morning, bonds would likely be losing ground. As it stands, a big jump in jobless claims is adding to labor market concerns and those are front and center when it comes to the Fed justifying a rate cut next week.

MBS are up a quick eighth in 5.5 coupons and a quarter point in 5.0 coupons. 10yr yields are down 5bps at 4.00%.
