Reasonably Resilient After AM Losses

MBS Recap | Matthew Graham | 3:50 PM

In another straightforward trading session, bonds responded logically to a trio of upbeat economic reports in the morning slot. None of the data was top tier in terms of relevance to bonds, but it was relevant enough to move the needle. Refreshingly though, 10yr yields treated 4.19% as a support level, which was the lowest possible pivot point after rising above 4.15%. This doesn't guarantee it will continue to hold, but it does suggest the bond market isn't in a rush to sell off without justification.

Lock / Float Considerations

- Thursday's stronger economic data and the bond market's willingness to react (albeit in a fairly measured way) reinforces the current state of play for rates. Simply put: weak data is required in order to see a reinvigoration of the rally. The other takeaway is that volatility risks are higher on data-heavy days.
