Bond Market in Holiday Mode

Holiday mode is impossible to clearly define when it comes to its impact on the bond market. We know it when we see it, and we saw it today. Bonds paid no attention to econ data no matter how much it may seem that the 10am Consumer Sentiment numbers had an impact. Movement was minimal and not visibly tied to any other motivation. And as we already discussed this morning, Japan's rate hike was a non-event. Holiday trading randomness will get worse over the next 2 weeks before it improves in early January.

Lock / Float Considerations

- We're now entering peak holiday mode for bond markets. This means a wider range of movement that can happen for no apparent reason even though the average year sees rates drift aimlessly sideways in the 2nd half of December. The next risk for consequential volatility from scheduled events won't be until the first week of January.
