Stunning Display of Holiday Trading Weirdness

MBS Recap | Matthew Graham | 4:43 PM

GDP for Q3 may be ancient history as far as econ data goes, but markets didn't seem to think so in the hour following this morning's release. GDP was much stronger than expected and bonds traded it like it was a legit market mover. But most of the reaction was a holiday-induced amplification of what might have otherwise only caused barely-noticeable weakness in bonds. That point was driven home by the end of the day as both Treasuries and MBS returned to unchanged levels.

A screenshot of the MBS Live software interface. The top navigation bar includes 'TIME', 'PRICING', 'TOOLS', 'SETTINGS', and 'GLENN NEZIER'. The main area features several windows: 'TIME PRICE' showing bond yields for various maturities; 'REAL TIME CHART (MBS)' showing a price chart for the 30-year MBS; 'REAL TIME CHART (T)' showing a price chart for the 10-year Treasury; and a 'LIVE CHAT' window on the right with a list of messages. A large circular 'PLAY VIDEO' button is overlaid in the center of the screen.

Update

8:35 AM Losing Ground After AM Data

Market Movement Recap

08:35 AM MBS are now down 1-2 ticks (.03-0.06) and 10yr yields are up roughly 1bp at 4.169

11:46 AM Bonds sold off a bit more after the last update, but are now back to similar levels with MBS down 2 ticks (.06) and 10yr up 1.1 bps at 4.17

02:00 PM MBS are down 1 tick (.06) and 10yr up 1.1 bps at 4.167

Lock / Float Considerations

- We're now entering peak holiday mode for bond markets. This means a wider range of movement that can happen for no apparent reason even though the average year sees rates drift aimlessly sideways in the 2nd half of December. The next risk for consequential volatility from scheduled events won't be until the first week of January.

Technicals/Trends in 10yr (why 10yr)

- Ceiling/Support (can be used as "lock triggers")
 - o 4.48
 - o 4.40
 - o 4.34
 - o 4.28
 - o 4.19
 - o 4.12
 - o 4.05
- Floor/Resistance
 - o 3.89
 - o 3.97
