Modest Recovery From Morning Weakness

MBS Recap | Matthew Graham | 3:22 PM

Bonds were slightly weaker this morning in a move that looked like it might have been significant when compared to yesterday's narrow range. But in a just-barely-wider context, today's volatility was just as inconsequential as almost any of the days in December so far. With that, we'll continue to count down to next week's bigger-ticket data and more robust trader participation.

The MBS LIVE software interface displays various financial data and tools. On the left, there are 'TIME PRICING' and 'MBS CALENDAR' sections. The central part of the screen features three 'REAL TIME CHART' windows for '30YR Fixed 4.00%', '10 Year Treasury', and '10 Year Treasury'. The '10 Year Treasury' chart shows a price of 106.75 with a recent price action of 106.70. The right side of the screen includes a 'LIVE CHAT' window with a list of messages and a 'GENERAL REPORTS' section with a summary table. A large, semi-transparent 'PLAY VIDEO' button is overlaid in the center of the interface.

Market Movement Recap

10:10 AM Moderately weaker overnight and sideways so far. MBS down an eighth and 10yr up 2.7bps at 4.135

12:02 PM bouncing back a bit. MBS down only 1 tick (.03) and 10yr up 1.2bps at 4.119

03:14 PM Still mostly sideways. MBS down 2 ticks (.06) and 10yr up 2.1bps at 4.128.

Lock / Float Considerations

- We're now entering peak holiday mode for bond markets. This means a wider range of movement that can happen for no apparent reason even though the average year sees rates drift aimlessly sideways in the 2nd half of December. The next risk for consequential volatility from scheduled events won't be until the first week of January.
