Modest Incidental Weakness

MBS Recap | Matthew Graham | 3:51 PM

Despite a bit of incidental selling today, the bond market has survived the winter holiday season without even attempting to break outside the narrow prevailing range. This is especially true for shorter duration Treasuries and MBS. It has been and continues to be the case that we won't get a sense of the next wave of momentum until next week at the earliest. It could take even longer if the econ data fails to make a compelling case for better or worse.

The screenshot shows the MBS LIVE interface with several data panels. On the left, a 'TIME PRACTICING' table lists bond yields for various maturities. The middle section features a 'REAL TIME CHART (10Y)' for the 10-Year Treasury, showing price, open, low, and high. The right side shows a 'REAL TIME CHART (30Y)' for the 30-Year Treasury. A central video player is overlaid on the charts, with a play button in the center. The bottom of the screen displays a 'LIVE NEWS STREAM' and a 'QUICK REPORT ON PRICES' section.

Market Movement Recap

09:35 AM Modestly stronger overnight and little-changed so far. MBS up 2 ticks (.06) and 10yr down 0.3bps at 4.165

01:29 PM weakest levels of the day. MBS down 1 tick (.03) and 10yr up 1.7bps at 4.186

Lock / Float Considerations

- We're now entering peak holiday mode for bond markets. This means a wider range of movement that can happen for no apparent reason even though the average year sees rates drift aimlessly sideways in the 2nd half of December. The next risk for consequential volatility from scheduled events won't be until the first week of January.
