Modest Incidental Weakness

MBS Recap | Matthew Graham | 3:51 PM

Despite a bit of incidental selling today, the bond market has survived the winter holiday season without even attempting to break outside the narrow prevailing range. This is especially true for shorter duration Treasuries and MBS. It has been and continues to be the case that we won't get a sense of the next wave of momentum until next week at the earliest. It could take even longer if the econ data fails to make a compelling case for better or worse.

The screenshot shows the MBS LIVE software interface. The top navigation bar includes 'TIME PERIOD', 'HELP', 'TOOLS', 'SETTINGS', and 'GLENN REEDER'. The main area features four charts: 'REAL TIME CHART (MAIN)' showing a 30-Year Treasury bond price of 106.75 (0.00), 'REAL TIME CHART (30)' showing a 30-Year Treasury bond price of 1.0270 (0.0010), 'REAL TIME CHART (10)' showing a 10-Year Treasury bond price of 1.2300 (0.0010), and 'REAL TIME CHART (5)' showing a 5-Year Treasury bond price of 1.2300 (0.0010). Below the charts is a 'LIVE NEWS STATION' with a play button overlay. The news feed includes headlines such as 'Andy Brooks, Jr. on 106.75' and 'Andy Brooks playing a role in the stimulus'. At the bottom, there is a 'LIVE & REPORTED PRICES' section and a 'PLAY VIDEO' button.

Lock / Float Considerations

- We're now entering peak holiday mode for bond markets. This means a wider range of movement that can happen for no apparent reason even though the average year sees rates drift aimlessly sideways in the 2nd half of December. The next risk for consequential volatility from scheduled events won't be until the first week of January.
