## Bonds Improve Back to Pre-Holiday Levels

MBS Recap | Matthew Graham | 4:18 PM

While there was some relevant econ data today (ISM Manufacturing), it didn't have an obvious impact on the bond market. Nonetheless, volume was back at pre-holiday levels. Notably, Dec 11(day after Fed day) was the last day of 2025 that wasn't affected by progressively lighter participation. 10yr yields closed at 4.15% on that day--the same level as today. The winter holidays don't always work out this perfectly, but it couldn't have been any more perfect this year. From here, we can plug back into the incoming econ data and read more significance into any major responses.

The screenshot shows the MBS LIVE interface. On the left, there's a 'REAL TIME PRICING' table for various bond maturities (30yr, 20yr, 10yr, 5yr, 3yr, 2yr, 1yr, 6mo, 3mo) with columns for Price, Yield, and Change. In the center, there are three 'REAL TIME CHART (1MIN)' for 30yr, 10yr, and 5yr bonds, each showing price, open, high, low, and close. A large play button is overlaid on the charts. On the right, there's a 'REAL TIME CHAT (1MIN)' window with a list of messages from users like 'Victor Shultz' and 'Cobain Dosewelt'. At the bottom, there's a 'LIVE NEWS STREAM' and a 'USER REPORTED PRICES' section.

## Lock / Float Considerations

- We're now exiting holiday mode for bond markets. Yields ended Monday, Jan 5th right were they ended the last full-fledged day of 2025 (Dec 11, post-Fed day), as if to command anyone who tuned out from the past 3 weeks of meaningless volatility. Whether or not we see meaningFUL volatility in the coming days will most likely depend on the econ data that comes out on Wednesday and Friday.
