## Bonds Improve Back to Pre-Holiday Levels

MBS Recap | Matthew Graham | 4:18 PM

While there was some relevant econ data today (ISM Manufacturing), it didn't have an obvious impact on the bond market. Nonetheless, volume was back at pre-holiday levels. Notably, Dec 11(day after Fed day) was the last day of 2025 that wasn't affected by progressively lighter participation. 10yr yields closed at 4.15% on that day--the same level as today. The winter holidays don't always work out this perfectly, but it couldn't have been any more perfect this year. From here, we can plug back into the incoming econ data and read more significance into any major responses.

The screenshot shows a complex financial trading interface. At the top, a navigation bar includes 'HOME', 'ABOUT', 'LOG IN', 'REGISTER', 'LOG OUT', and 'GLENN NESTER'. Below this are two tabs: 'REAL TIME PRICING' and 'REAL TIME CHART (MAIN)'. The 'REAL TIME CHART (MAIN)' tab is active, displaying a line chart for the '10YR FUTR 4.0' with a price of 106.75 (0.00). The chart shows price movement from 106.50 to 106.80 over a 24-hour period. A large play button is overlaid on the chart. To the right of the chart is a '10 Year Treasury' chart with a price of 1,8270 (-0.0010). The bottom section of the interface includes a 'LIVE NEWS STREAM' and a 'USER REPORTED PRICES' section. A 'CHAT' window on the right is titled 'MBS LIVE CHAT' and shows a list of recent messages from users like 'Glen', 'Andy', 'Mike', and 'Bob'.

## Lock / Float Considerations

- We're now exiting holiday mode for bond markets. Yields ended Monday, Jan 5th right were they ended the last full-fledged day of 2025 (Dec 11, post-Fed day), as if to commend anyone who tuned out from the past 3 weeks of meaningless volatility. Whether or not we see meaningful volatility in the coming days will most likely depend on the econ data that comes out on Wednesday and Friday.
