Ending Near Unchanged Levels After Early Head Fake

MBS Recap | Matthew Graham | 4:24 PM

Trading volumes confirm that bonds are 100% back in action, but after this morning's selling pressure proved to be a head fake, that volume hasn't translated to any meaningful momentum. This isn't too hard to accept considering the absence of big-ticket econ data. Things change on Wednesday with the release of ADP, JOLTS, and ISM. This is our first chance to see some actual data-driven volatility in several weeks.

The screenshot displays the MBS LIVE interface. On the left, a 'TIME TICKING' panel shows bond prices for various maturities. The central area features three 'REAL TIME CHART' windows: '20YR Fwd 4.0' (Price: 106.75, Change: 0.00), '10 Year Treasury' (Price: 1.8270, Change: -0.0010), and '10 Year Treasury' (Price: 1.8270, Change: -0.0010). A large play button is overlaid on the charts. Below the charts is a 'LIVE NEWS STREAM' with a headline about the Fed's stimulus. To the right is a 'LIVE & REPORTED PRICES' section with a 'RECENT CHAT' window showing a conversation between users. The bottom of the screen features a 'PLAY VIDEO' button and a 'MBS LIVE ALERT' section with a headline about negative repricing risk.

Lock / Float Considerations

- The second half of the week brings a long-awaited glut of bigger-ticket data. The first hurdle is Wednesday morning's ADP, JOLTS, and ISM. Taken together, these introduce plenty of risk of a departure from the recent range, for better or worse. Risk-averse clients have an easy decision to make with average rates very close to long term lows.
