Mostly Quiet Ahead of Friday's Jobs Report

Bonds lost a bit of ground on Thursday with most of the weakness seen in the overnight session in sympathy with European bond market weakness. The rest of the selling followed a stronger weekly jobless claims report. That said, we wouldn't give the data all the credit based on the timing of the selling and additional back-and-forth throughout the day. Tomorrow is far more interesting anyway. It brings what many view as the first clean reading of the big jobs report since before the government shutdown. Point being: the market will likely be more willing to react to any result that falls far from the median forecast--especially if the job count and unemployment rate both make the same case.

Lock / Float Considerations

- Friday's jobs report is this week's last big-ticket event. As always, this report carries a wider range of potential movement for the bond market than any other econ data. Sometimes it threads the needle and there's minimal change. Other times it sets off decisive directional momentum. All we can know about ahead of time is the heightened volatility potential.
