## CPI Helped Bonds Avoid Losing Ground

**MBS Recap** | Matthew Graham | 4:46 PM

Bonds began the day in slightly weaker territory and managed to flip into slightly stronger territory after the CPI data. Core monthly CPI printed at 0.2, but was rounded down from 0.24. In other words, it wasn't as big of a beat as the "0.2 vs 0.3" result suggested. The notion of inflation being "lower but still elevated" contributed to the tepid response. As for MBS, they were in positive territory all day even though charts made them look weaker due to monthly settlement. Wednesday morning brings November's retail sales data and Producer Price Index (PPI). Neither are as heavy hitting as CPI, but they could move the needle if they fall far from forecast.

The screenshot displays the MBS LIVE interface. On the left, a 'REAL TIME PRICING' section shows bond yields for various maturities, including 30Y, 20Y, 10Y, and 5Y. The 10Y yield is highlighted in green at 3.50%. In the center, a 'REAL TIME CHART (BOND)' shows the price of a 30Y bond, which has moved from 106.75 to 106.70. A 'REAL TIME CHART (TREASURY)' shows the price of a 10 Year Treasury, which has moved from 1.8279 to 1.8270. On the right, a 'REAL TIME CHART (MBS)' shows the price of a 30Y MBS, which has moved from 106.75 to 106.70. A large circular play button is overlaid on the charts. Below the charts, a 'LIVE NEWS STREAM' provides updates on MBS news, including a story about the Federal Home Loan Bank's plan to consolidate its AFOAC and AFOB operations. The bottom of the screen features a 'PLAY VIDEO' button.

## Lock / Float Considerations

- Bonds weren't too keen on a big reaction to CPI data, but that shouldn't stand as evidence that data will continue to be ignored. Wednesday's offerings aren't on CPI's level, but there's still room for volatility if they fall far from forecasts. Moreover, Treasuries seem like they're just waiting for an excuse to test a bearish breakout.
