Some Asymmetric Risk When it Comes to Locking vs Floating

MBS Recap | Matthew Graham | 3:57 PM

Bonds improved today mostly in response to heavy stock losses creating some safe haven buying demand. Data wasn't heavily traded, but it didn't do any harm. Producer Prices were mixed, with an upward revision in September being offset by lower-than-expected inflation in November. Retail Sales (also November data) beat at the headline, but the control group (excludes autos/gas/building materials) was in line with estimates and October's number was revised lower. Despite the bond gains, mortgage rates were unchanged. This offers a potential clue about lenders being resistant to the notion of offering meaningful improvements from current levels in the short term.

The screenshot shows the MBS Live interface. On the left, there's a 'TIME PRICING' table for 30-year bonds with columns for Price, Yield, and Change. The table shows data for various bond types, including MBS 30 Year, MBS 10 Year, and MBS 30 Year. In the center, there are two 'REAL TIME CHART (30Y)' for '30Y FOMA 4.0' and '10 Year Treasury'. The charts show price movements over time. A large play button is overlaid on the charts. On the right, there's a 'LIVE CHAT' window with a list of messages from users like 'Victor Daniels' and 'Austin Pfeiffer'. At the bottom, there's a 'LIVE NEWS STREAM' with a headline about 'MBS Live: Bond Market Consolidates Around 4.00%'. The overall interface is designed for monitoring financial markets in real-time.

 - 0.4% vs 0.4% f'cast, 0.8% prev

Market Movement Recap

- 09:11 AM No major reaction to AM econ data. MBS up 1 tick (.03) and 10yr down 1.6bps at 4.165
- 11:23 AM Best levels of the day with MBS up 5 ticks (.16) and 10yr down 4.2bps at 4.138
- 01:58 PM Little changed from last update. MBS up 5 ticks (.16) and 10yr down 4.7bps at 4.133

Lock / Float Considerations

- The absence of rate improvement despite bond market gains suggests some asymmetric risk for the lock/float outlook. On one hand, it could be viewed as lenders having a cushion to absorb any incidental weakness in the coming days. On the other hand, it also suggests lenders aren't keen to drop rates below current levels for a few days or without a more significant rally in bonds.

Technicals/Trends in 10yr (why 10yr)

- Ceiling/Support (can be used as "lock triggers")
 - o 4.48
 - o 4.40
 - o 4.34
 - o 4.28
 - o 4.19
 - o 4.12
 - o 4.05
- Floor/Resistance
 - o 3.89
 - o 3.97
