Data-Driven Weakness

MBS Recap | Matthew Graham | 4:32 PM

It was a reasonably straightforward day for the bond market. Trading was flat overnight, then weaker after the 8:30am Jobless Claims data. That report is hit and miss as a market mover, but a sub-200k print without any recent seasonal spike is certainly worth a few bps of weakness. Impacts were most notable in Fed Funds Rate expectations, which have now fully eliminated any possibility for a January cut and lowered the probability of a March cut from over 40% last week to under 20% today. In the bigger picture, longer-term rates remain squarely range-bound and MBS remain broken out the top of their comparable range thanks to GSE purchases.

Lock / Float Considerations

- There were two ways to approach lock/float decisions yesterday afternoon (lenders who didn't reprice for the better had a bit of a cushion today, and it showed. Lenders who repriced were susceptible to today's weakness). Contrast that to this afternoon where there's been little-to-no reprice activity and Friday's risk/reward profile is more balanced. Certainly, GSE MBS purchases offer some built-in insulation for risk-tolerant clients. But broader bond market bearishness and our nearness to multi-year lows in conventional rates present compelling lock opportunities for the risk-averse crowd.
