Range Breakout Intensifies. Chicken or Egg?

MBS Recap | Matthew Graham | 4:50 PM

After months spent observing the same old range in the bond market, we're finally in the throes of a confirmed breakout. Unfortunately, the breakout has seen 10yr yields surge almost 10bps above the range ceiling in just 2 days. Technical analysts are high fiving each other because this is a classic breakout event (higher volume, sharper movement in the direction of the breakout). Fundamental traders are saying "not so fast" because there's nothing to say bonds couldn't be in decent shape today without fiscal drama in Japan or spiraling geopolitical tension over Greenland. We got unequivocal confirmation of the latter today when a Danish pension fund said it was pulling out of US Treasuries. That marked the day's biggest volume spike and sharpest selling.

The screenshot shows the MBS LIVE software interface. On the left, there's a 'TIME PRICING' table for 10yr bonds, showing various yields and prices. The main area features two 'REAL TIME CHART (IND)' for '30yr Fixed' and '10 Year Treasury'. The '10 Year Treasury' chart shows a significant upward trend with a green line, indicating a breakout. A large play button is overlaid in the center of the charts. To the right, there's a 'MBS LIVE CHAT' window with a list of messages from users like 'Andy Hinkle, Jr.' and 'White House'. At the bottom, there are news headlines and a 'GICS REPORT ON PRICES' section.

Market Movement Recap

08:37 AM Sharply weaker overnight as bonds brace for fallout with Europe over Greenland push. 10yr up 6.1bps at 4.285. MBS down nearly 3/8ths of a point.

10:43 AM Bouncing back a bit. MBS down 5 ticks (.16) and 10yr up 4.7bps at 4.27

01:47 PM MBS now down 10 ticks (.31) on the day and almost 6 ticks (.19) off intraday highs. 10yr up 6.2bps at 4.286. No new drama. Just gradual selling.

Lock / Float Considerations

- Bonds positioned for geopolitical risk over the 3-day weekend, but apparently not enough. Lock/float risks remain asymmetric as a result (rallies would more likely be modest/gradual whereas sell-offs could be faster-paced). This is not directional guidance--merely an assessment that "bad stuff" would probably hurt more than the "good stuff" would help in the near term.
