Volatility Eludes Bonds

MBS Recap | Matthew Graham | 4:35 PM

Bonds saw some steady selling pressure earlier in the week, but with the total damage amounting to an average of 2bps per day in 10yr yields, it was anything but volatile. The past 2 trading sessions had more noticeable ups and downs, but they played out in an even narrower range. Friday, specifically, was woefully range-bound with 10yr yields essentially in a 2bp range all day. Balmy PPI data and Fed Chair decisions and historic volatility in certain commodities didn't make any difference. Even the 3pm ET month-end trading barely registered a response despite the typical surge in volume (by far the highest minutes of volume of every month). Next week brings the big ticket econ data and thus a chance for some legit data driven volatility.

The screenshot displays the MBS LIVE trading platform interface. It features several windows: a 'TIME PRICING' table for MBS 30 Year, a 'REAL TIME CHART (4.0)' for 30yr FOMO 4.0 showing a price of 106.75 (0.00), a 'REAL TIME CHART (50)' for 10yr Treasury showing a price of 1.8270 (-0.0010), a 'LIVE NEWS STREAM' with a headline about the ECB stimulus, and a 'LIVE CHAT' window on the right. A large play button is overlaid in the center of the screen.

Lock / Float Considerations

- Mortgage rates have some insulation against broader bond market sell-offs due to GSE MBS purchases, but barring a big Treasury rally, the lower limit of the mortgage rate range was established in early January. One of two things is required for a meaningful push back toward lower rates: more selling to set an entry point for bond buyers, or legitimate deterioration in big ticket data (and there's none on the horizon until the first week of February).
