## Bonds Close Out Epic Week of Resilience With Friendly Data

**MBS Recap** Matthew Graham | 4:13 PM

Friday was a logically friendly day thanks to slightly lower CPI. But no matter what happened on any of the other 4 days, this week was all about bonds ending up at much stronger levels in spite of a jobs report that should have sent rates higher on Wednesday. Ironclad justification remains impossible, but the leading theory involves heavy liquidation mode in stocks/commodities on Thursday. Holiday weekend positioning could also be a factor. As such, we'll learn a lot more next Tuesday--especially if stocks find a reason to stage a big bounce.

## Lock / Float Considerations

- Thursday night was a coin flip for locking/floating. It ended up being rate-friendly thanks to CPI, but the moderate gains suggest the mystery momentum that fueled an impressive week for bonds is starting to wane. Risk-averse clients continue to favor locking in these scenarios--especially with rates basically matching 3.5-year lows. Risk-tolerant clients have that much more room to set overhead lock triggers.
