Bonds Close Out Epic Week of Resilience With Friendly Data

MBS Recap | Matthew Graham | 4:13 PM

Friday was a logically friendly day thanks to slightly lower CPI. But no matter what happened on any of the other 4 days, this week was all about bonds ending up at much stronger levels in spite of a jobs report that should have sent rates higher on Wednesday. Ironclad justification remains impossible, but the leading theory involves heavy liquidation mode in stocks/commodities on Thursday. Holiday weekend positioning could also be a factor. As such, we'll learn a lot more next Tuesday--especially if stocks find a reason to stage a big bounce.

The screenshot shows the MBS LIVE interface. At the top, there are three charts: a bar chart for 'MBS 30 Year' bonds, a line chart for '30YR Fixed' rates, and a line chart for '10 Year Treasury' rates. The '10 Year Treasury' chart is highlighted with a green box and shows a recent price drop from 1.8270 to 1.8266. Below the charts is a 'LIVE NEWS STREAM' with a headline about the ECB's interest rate decision. To the right is a 'USER REPORTED PRICES' section and a 'CHAT' window titled 'MBS LIVE CHAT' with several messages from users. A large play button is overlaid in the center of the screen.

Lock / Float Considerations

- Thursday night was a coin flip for locking/floating. It ended up being rate-friendly thanks to CPI, but the moderate gains suggest the mystery momentum that fueled an impressive week for bonds is starting to

wane. Risk-averse clients continue to favor locking in these scenarios--especially with rates basically matching 3.5-year lows. Risk-tolerant clients have that much more room to set overhead lock triggers.
