General Risk Aversion Trade Helping Bonds

MBS Recap | Matthew Graham | 2:39 PM

Bonds began the day in just barely stronger territory but continued to improve throughout. The first rally followed the 8:20am CME open--a common time of day to see a bit of extra momentum and volume. The next leg of the rally played out in the 10am hour which is when stocks did all of their selling for the day. That dynamic lends itself to the conclusion that the broader market is trading in a "risk-off" pattern amid global trade uncertainty.

Lock / Float Considerations

- Bonds erring on the stronger side of the prevailing range to start the new week, ostensibly due to general trade-related uncertainty. Much like 3 weeks ago (when we said bonds would need convincing from econ data in order to improve very much), we'd similarly need to see some strong econ data to push rates meaningfully higher. In other words, we're a bit more insulated than we had been, but we also have to consider that any big announcement on trade can cause this insulation to vanish, and such announcements don't adhere to set schedules like econ reports.
