Bonds Weren't Prepared For Fed's Inflation Fears

MBS Recap | Matthew Graham | 5:03 PM

If anything, you'd think the market would have been pricing in a **hawkish** Fed day, given the run up in energy prices. But Powell threw reporters a curve ball during the press conference and instead placed the focus on other categories of inflation that were under the microscope before the energy price spike (like core goods and non-housing services), saying there'd been less progress than hoped. The takeaway was that rate cuts are on hold for the foreseeable future. The market agrees, as it is now pricing the next rate cut at more than a year in the future. Bonds were already losing ground on oil price spikes (and PPI to a lesser extent). The net effect took yields back near recent highs and hit MBS for almost half a point.

Lock / Float Considerations

- updated 3/18/26 after Fed day.

Fed reaction added more volatility than expected to an already volatile environment. Risks remain elevated mainly due to geopolitical uncertainty and the energy price rout. All of March has been generally a one-way trade for bonds with a few corrective moments. We'd continue to wait for the dust to definitively settle before feeling like taking any major risks with locking/floating.
