Global Bond Market in Reprice Mode

MBS Recap | Matthew Graham | 5:19 PM

Around here, "reprice" typically refers to mid-day rate changes from mortgage lenders, but infrequently, a big picture repricing occurs in the bond market. That's what's going on in March and especially over the last 2.5 days. Wednesday's Fed comments and Thursday's ECB/BOE comments confirmed that there's a floor under short term rates for a vast majority of the planet's reserve currency holdings, AND that hikes are quickly replacing cuts as the next likely move (September Fed meeting went from 0% hike chance to more than 25% in less than 2 days). Trading and investment strategies of a majority of the world's investible capital was positioned for an entirely different reality before the Iran war. Now it is repositioning... repricing for new realities.

Lock / Float Considerations

updated 3/20/26

Things are very simple right now because they're very bad. All of March has been generally a one-way trade for bonds with a few corrective moments. We'd continue to wait for the dust to definitively settle

before feeling like taking any major risks with locking/floating. The only arguments in favor of floating involve attempting to predict the future and catch falling knives.
