## Calm and Slightly Stronger, But Volatility Will be Back

MBS Recap | Matthew Graham | 3:28 PM

Once or twice per week, the bond market manages to post a fairly calm trading day against the prevailing backdrop of generally higher volatility. Today was such a day. The most helpful catalyst was an absence of any major war-related headlines and associated oil price volatility. That said, it's a near certainty that war-related volatility will be back in the coming week.

## Lock / Float Considerations

- 5/8/26 - Bonds remain range-bound after starting the week near the highs and failing to break below 4.34%. The next big move depends on the course of the war. There's no way to set a lock/float strategy based on war headlines in the short term. In the slightly longer term, a peace deal would likely carry some benefit for rates versus current levels.
