MBS Fully Recover After Initial Reaction to Inflation Data

MBS Recap Matthew Graham | 3:37 PM

There's no question that this morning's PPI data hit the bond market. The volume spike was easily higher than that seen with yesterday's CPI and the market movement left nothing to the imagination. In the big picture, a few bps of weakness in bond yields isn't that alarming, but if we consider PPI isn't usually a big

deal and the yields started to rise again, things began looking more meaningful. Despite the initial reaction, bonds found their footing after 11:30am. 10yr yields made it almost all the way back to pre-data levels and MBS fared even better--ultimately turning green around 2pm.

Lock / Float Considerations

- 5/13/26 - (unchanged from Tuesday) War headlines continue driving volatility in the bond market and beyond. There's no way to set a lock/float strategy based on the war in the short term because potential volatility is higher and it doesn't adhere to a schedule. In the longer term, a peace deal would likely carry some benefit for rates versus current levels.
