## Headwinds, Cont'd

**MBS Recap** | Matthew Graham | 5:05 PM

"Headwinds, Cont'd" could be apply to the entirety of 2022-2026 or just March-July of 2026. But let's just focus on today's installment. For the second day this week, there wasn't any stellar correlation between bonds and other markets, econ data, or news headlines. Still, we wouldn't say that today's moderate weakness was a mystery move. In fact, it may even be fairly straightforward. Fuel prices came into the week at the highest level since May 19th (which was the highest since 2022). Front month oil futures spiked in the early AM hours and the peak coincided with the peak in bond yields. Additionally, bonds sold off at 9:30am for the second straight day, suggesting some tradeflow considerations surrounding the NYSE open and earnings season money shuffling.

## Lock / Float Considerations

- 7/21/26 - Momentum remains broadly negative in the bigger picture. Risk-averse clients continue waiting for that to change before shifting out of a lock-biased stance. Risk-tolerant clients are running out of overhead lock triggers, though some bond strategists would say this makes a near-term bounce more likely. Either way, any major event-driven bounce would create short term opportunities.
