## Solid Data-Driven Gains

MBS Recap | Matthew Graham | 5:09 PM

Thursday was a fairly straightforward session for bonds. Yields fell modestly overnight in response to slightly lower oil prices and then more forcefully after the cooler-than-expected PPI data. Mid-day fuel price volatility caused a slight pull-back, but not enough to undo a reasonably robust rally by the close. If there's a "yeah but," it's that yields remain broadly sideways near long-term highs and were unable to challenge last week's lows.

## Lock / Float Considerations

## Lock / Float Considerations

- 8/13/26 - Lowest rates in nearly 4 weeks = always a compelling lock opportunity for risk-averse clients. That said, decent inflation data, the passing of the Treasury auction cycle, and overhead technical support for Treasury yields presents a similarly compelling opportunity for the risk-tolerant crowd. From technical standpoint, the risk is the trend of higher lows since July 29th with today representing another bounce.
