Technically a Breakout, But It Could Have Been Worse

MBS Recap | Matthew Graham | 4:59 PM

10yr yields closed just under 4.74 at the end of July and just over 4.75% today. That's the highest close since January 2025 which, at first glance, sounds pretty gloomy. But it's worth noting that several days have ended just a bp or two below today's levels. In other words, it was ultimately a small, incremental bump. Perhaps more importantly, it was not-at-all out of character with respect to the prevailing trend.

[Watch the Video](#)

4:12 PM

09:33 AM	MBS down 6 ticks (.19) and 10yr up 4bps at 4.753
12:24 PM	MBS down 5 ticks (.16) and 10yr up 4.9 bps at 4.761
04:01 PM	MBS down 3 ticks (.09) and 10yr up 3.2bps at 4.744

8/31/26 - AM weakness may have been driven by temporary factors, but bonds nonetheless broke to the weak side of technical support levels. Moreover, the negative trend easily remained intact. There will always be pockets of correction amid broadly negative momentum, but trying to time those accurately is impossible. It makes sense to remain defensive until there's a clear reversal in the bigger-picture trend.
