

# MARKET SUMMARY

Complete Recap of Today's Market Activity

## Two Kinds of Flat

Market Summary: Tuesday, July 16, 2024 - 2:35PM

Retail Sales was/is the biggest data point of the week and it came out perfectly unchanged. This was as-expected according to some data aggregators and stronger than expected according to others. Perhaps more importantly, some of the closely watched internals were much stronger. For example, excluding autos and gas, retail sales rose 0.8% versus 0.3% last month and forecasts of 0.1%. This helps the flat headline look stronger than expected. It is also resulting in a flat morning for MBS, which marks a loss of roughly 6 ticks (.19) in MBS versus opening levels. Technically, bonds are still in modestly stronger territory due to solid overnight gains. The rest of the day will be spent fighting to hold just inside positive territory and that would be a good victory in the bigger picture considering rates are at 5 months lows.

### Market Movement Recap

08:35 AM MBS are back to unchanged levels. 10yr yields are down 3.2 bps at 4.20%.

11:06 AM Doing a decent job holding in positive territory now. MBS up 3 ticks (.09). 10yr down 3.7bps at 4.196.

02:03 PM Treasuries back at best levels, down 6bps at 4.173. MBS up an eighth.

### Mortgage Rates' Impressive Winning Streak Faces Increasing Resistance

We occasionally reference 5 day winning streaks for as the sort of uncommon occurrence that greatly increases the odds of at least a temporary pullback. Longer streaks do happen, but odds of a pullback increase sharply after 8 days.

With all that in mind, today marked the 8th straight day of improvement in mortgage rates.

Does this mean we're destined to see rates move higher tomorrow? Not necessarily. First off, we can never be sure we're destined to see any particular outcome when it comes to the simple question of whether rates will move higher or lower over such a definite time frame.

Perhaps more interesting is the fact that the underlying bond market (rates are a factor of bond prices) has already seen a mild pullback that began shortly after last Thursday's inflation data. It was just mild enough that the average mortgage lender was able to avoid increasing rates since then.

Last but not least, rather than rely on precedent in the absence of context, we should consider that rates have been responsive to a small group of important economic reports. While it's not on the same level as last week's inflation data, tomorrow's Retail Sales data is one such report. Simply put, there's no magic rule that would preclude a 9 day winning streak if Retail Sales happened to fall far enough below forecasts. Conversely, if the data is surprisingly strong, rates would likely rise and it would have nothing to do with the low odds of 9 day winning streaks.

## Sharply Lower Inflation Brings Fed Rate Cuts Into Focus

There was a lot riding on this week's economic data and it delivered in a big way. The Consumer Price Index (CPI) has had the biggest influence on interest rates of any of the scheduled monthly economic reports, and for good reason. It is one of the two biggest and most detailed inflation reports on any given month, and it comes out about 2 weeks before the other one. That's incredibly im...
