

MARKET SUMMARY

Complete Recap of Today's Market Activity

The Case For a Sideways Ceiling Continues to Build

Market Summary: Thursday, November 21, 2024 - 10:55AM

Granted, yields are only 3 days removed from hitting their highest levels in 5 months, but those levels weren't much worse than November 6th. If we treat this zone (call it 4.45% in 10yr yields, give or take 0.05%) as a potential ceiling, it received yet another vote of support with today's very calm trading near 4.42%. Geopolitical headlines were taken in stride (modest improvement) and 20yr auction results pushed back a bit in the afternoon. Most importantly (not really), bond traders managed to stay someone engaged despite every news story, email, TV segment, etc. focusing on NVIDIA earnings.

Jobless Claims Stay Low, But Continued Claims Help Offset

- Jobless Claims
 - 213k vs 220k f'cast, 219k prev
- Continued Claims
 - 1908k vs 1870k f'cast, 1872k prev
- Philly Fed Index
 - -5.5 vs 8.0 f'cast 10.3 prev

Bonds were roughly unchanged to slightly stronger in the overnight session with minimal volatility after the close yesterday. The econ data is mixed. Although the 213k Jobless Claims headline is unfriendly to rates, all other things being equal, it is offset by another long-term high in continued claims. To a lesser extent, the miss in Philly Fed is also possibly a bit helpful.

MBS are still up 2 ticks (.06) and 10yr yields are down roughly half a bp at 4.399

Mortgage Rates Have Been Much Calmer, But They're Still High

Remember October and the first part of November--not because of the election, but rather because of the relentless rise in ? Would you rather forget? You're not alone. It was the fastest rate spike since 2022, and it was made all the more memorable because it put an end to the first real uptick in refinance activity in just as long.

In the days following the election, there was quite a bit of volatility in rates, but with the benefit of hindsight, we can say that the volatility has subsided. Tuesday, November 12th was the last time rates made a decently big day-over-day move. Since then, we haven't seen top tier 30yr fixed rates change by more than 0.04% in either direction. More impressively, they've held a range of only 0.06% during that time. That's a low volatility environment by any standard.

Today fit perfectly in that narrative with the average lender only moving up 0.01%. After adjusting for upfront costs, 30yr fixed rates remain just over 7%.

Any time we're marveling at the absence of volatility, a word of caution is in order. Volatility can come back any time. Its return can be driven by surprises or by scheduled data. At the very least, we can be sure that the scheduled data in the first two weeks of December has immense potential to reignite volatility, for better or worse.

Are Rates Done Freaking Out Yet?

Mortgage rates bounced hard off the long term lows back in September and had jumped almost a full percent by last week. In addition to the elevated levels, there's been plenty of volatility. Nonetheless, rates managed to avoid breaking last week's ceiling-- even if only just. Does that mean it's time for hope? Hope is always a fine thing to have, but it's not a strategy when it comes to mortgage...
