Complete Recap of Today's Market Activity

Broad, Negative Momentum is Masking Normal Market Movers

Market Summary: Wednesday, January 15, 2025 - 9:11AM

Tuesday featured a much weaker PPI report that failed to inspire any lasting rally in the bond market. While there were a few ways to reconcile that specific turn of events by examining the internal components of the data, it's also true that bond market momentum has been broadly negative recently. At times like this, data has to work harder if it wants to push rates lower. It can even seem like rates move higher whether the data is good or bad. Today's recap video includes an in-depth assessment of this phenomenon. Long story short, things are still mostly logical, as long as we're considering all the pieces on the board.

UMBS 5.5 98.23 +0.79 | 10YR 4.653% -0.149% 1/15/2025 5:00PM EST

Much Stronger After CPI Comes in Soft

- Monthly Core CPI
 - 0.2 vs 0.2 f'cast, 0.3 prev
 - unrounded: 0.225 vs 0.240
- Annual Core CPI
 - 3.2 vs 3.3 f'cast, 3.3 prev

Bonds were already in stronger territory to start the day, but we're seeing additional improvements in the wake of the data. MBS are up 3/8ths and 10yr yields are down almost 10bps at 4.708. More detailed analysis will follow in the AM commentary.

Mortgage Rates Make a Modest Recovery Ahead of Important Inflation Data

officially hit the highest levels since May 2024 yesterday, even though the average was almost imperceptibly higher than last Friday's. We saw a similarly small move today, but in the opposite direction.

In other words, the average rate moved lower by an amount that won't even have an impact on many of yesterday's rate quotes. As always, keep in mind that our rate index is an average of multiple lenders and on days with very small changes, some lenders can be noticeably better or worse compared to the previous day.

This morning's economic data featured the Producer Price Index (PPI)--a report that measures inflation at the wholesale level. It came in at lower levels than expected. That would normally be good for rates, but it didn't have much of an impact today.

Tomorrow's inflation report--the Consumer Price Index (CPI)--is in a different league. If it undershoots forecasts by the same margin, rates would almost certainly move lower. Conversely, rates would almost certainly rise if inflation overshoots forecasts.

There's no guarantee of rate-friendly data tomorrow simply because today's inflation report was lower than expected. CPI frequently departs from PPI on any given month, even though the two tend to do the same things over longer time horizons.

Highest Mortgage Rates in 7 Months After Upbeat Jobs Report

Mortgage rates weren't having a great week in the first place. As of Wednesday, the average lender was already up to the highest levels since June 2024. But up until that point, there hadn't been too much volatility. The rising rate trend kicked into higher gear after Friday morning's jobs report. Officially known as The Employment Situation, the jobs repo...
