

MARKET SUMMARY

Complete Recap of Today's Market Activity

Making Headway on ISM Data, and Lesser Supporting Actors

Market Summary: Wednesday, February 5, 2025 - 3:03PM

To say the very least, there are more moving pieces to consider at the moment when it comes to the narrative guiding volatility and momentum in the bond market. Tariff and policy-related headlines have been good for ebbs and flows in risk sentiment, but haven't necessarily accounted for a majority of the momentum. That said, an absence of a more onerous tariff roll-out has likely been worth some relief in bonds. On a more material note, today's Treasury refunding announcement confirmed the expected level of issuance this quarter--not groundbreaking news, but mildly reassuring at least. And then there's the fixture in the bond market movement game: economic data. Today's slate is limited to ADP employment and ISM Services when it comes to perennial market movers. ADP was forgettable, but ISM missed forecasts both at the headline level and in the inflation component. With that, bonds are off to a noticeably stronger start.

Making Headway on ISM Data, and Lesser Supporting Actors

To say the very least, there are more moving pieces to consider at the moment when it comes to the narrative guiding volatility and momentum in the bond market. Tariff and policy-related headlines have been good for ebbs and flows in risk sentiment, but haven't necessarily accounted for a majority of the momentum. That said, an absence of a more onerous tariff roll-out has likely been worth some relief in bonds. On a more material note, today's Treasury refunding announcement confirmed the expected level of issuance this quarter--not groundbreaking news, but mildly reassuring at least. And then there's the fixture in the bond market movement game: economic data. Today's slate is limited to ADP employment and ISM Services when it comes to perennial market movers. ADP was forgettable, but ISM missed forecasts both at the headline level and in the inflation component. With that, bonds are off to a noticeably stronger start.

These gains are potentially more important than gains at another random level as they help make a case for pivot down below the 4.50 mark.

Mortgage Rates Finally Make a Move (Lower)

The recent absence of volatility in day-to-day mortgage rate movement has been an easy target for light-hearted indignation among market watchers. But to be fair, if rates had been moving swiftly higher/lower/both, most market watchers would wish for some sideways stability.

In fact, for most prospective borrowers as well as mortgage professionals, the only thing better than sideways stability is a healthy drop to lower levels. Now, after a week of utter flatness, we finally have such a drop.

Rates are determined by trading levels in the bond market and bonds can be influenced by many factors. One of the most reliable is the periodic release of various economic reports. Today's key data showed less strength than expected in the services sector. In general, when an important economic metric is weaker than expected, it pushes rates lower, and vice versa.

Today was no exception, but bonds had already improved even before the data came out. Connecting the dots of causality on that additional movement requires a bit more speculation, but some would say it has to do with perceived economic headwinds associated with new fiscal policies. Conversely, others would say it's due to the delayed timeline of implementation for those same policies.

Either way, the net effect is always measurable because we can always take inventory of multiple mortgage lenders' rate offerings. In doing so today, we find the top tier conventional 30yr fixed rate back below 7% for the first time since December 17th, even if only be a mere 0.01%.

Bonds Brace For Tariff Impact, Just Like Last Time

Spoiler alert: no one really knows how tariffs are going to impact the market yet. Much is left to be decided, and the outcomes can vary depending on the details. Markets were certainly willing to react to tariff headlines this week with Thursday and Friday overshadowing Wednesday's Fed announcement. In general, both stocks and bonds are treating tariffs the same way they treat the Fed Funds Ra...
