Complete Recap of Today's Market Activity

## Consolidation Continues Ahead of CPI

Market Summary: Tuesday, March 11, 2025 - 9:33PM

February 19th through March 3rd marked an exceptionally directional rally for bonds. The following day brought the big blow-up in German debt, and the start of the consolidation in US rates. Granted, if domestic economic data been weaker, the rally may have tried to soldier on, but after the jobs report came out near consensus, that was that. As has been the case for several years, the next major report after the jobs report is CPI, and CPI is arguably even more important at the moment. This isn't to say we're guaranteed to see a big reaction--only that the potential is there, should the data come in much higher or lower than forecast. As for today, it was just another in the ongoing consolidation with bonds determined to move back to the higher end of the recent sideways range after moving lower yesterday.

Consolidation Continues Ahead of CPI

### MBS & Treasury Markets

UMBS 5.5	99.76	+0.15	10YR	4.269%	-0.012%	3/12/2025 1:33AM EST
----------	-------	-------	------	--------	---------	----------------------

## Negative Reprice Risk Increasing

MBS are now down more than a quarter point on the day (10 ticks or 0.31) after headlines regarding truce talks between Ukraine and Russia. Most lenders are seeing at least an eighth of a point of weakness now, so the jumpier crowd could be closer to repricing.

10yr yields are up 6.5bps at the highs of the day (4.276).

**MBS MORNING:** Increasingly Reluctant to Rally Without More Motivation

**ALERT:** Down an Eighth From Highs

## Today's Mortgage Rates

15YR Fixed 6.21% +0.03% 3/11/2025

## Mortgage Rates Slightly Higher Ahead of Important Inflation Data

With fiscal and geopolitical developments dominating the news cycle, it would be easy to forget that prefer to take their primary cues from economic data. This is an important reminder considering tomorrow morning brings one of the most closely watched economic reports: the Consumer Price Index (CPI).

CPI is one of only a few inflation reports from the U.S. government. It is also the out 2 weeks earlier than its only real competitor. Because of that, and the fact that rates are greatly impact by inflation, CPI is one of the biggest potential sources of rate volatility.

There are certainly other economic reports that matter. Even today's Job Openings data managed to cause small scale volatility this morning, but CPI is far more capable. As always, in order to have a truly big impact on rates, the data would need to come in much higher or lower than forecast, and there's no way to know where it will come in ahead of time (economists have already done their best to forecast that).

As for today, stock market fluctuations proved to be a bigger influence than the Job Openings data, ultimately pushing rates slightly higher compared to yesterday's latest levels.

## The Secret Reason That Rates Bounced This Week

There's a lot for financial markets to digest at the moment. Over the past few weeks, the net effect of that digestion has been good for bonds/rates and bad for stocks. But the prevailing correlation broke down this week and few people in the U.S. truly understand why. That's forgivable, considering there has been a lot to react to in terms of economic data and fiscal updates. Monday's weaker&n...
