Complete Recap of Today's Market Activity

## Surprisingly Big Sell Off Relative to The Inspiration

Market Summary: Friday, May 9, 2025 - 2:06AM

Bonds ended up selling off somewhat sharply today with the bulk of the blame apparently reserved for the UK/US trade deal. In fact, the pace of the selling wasn't something we would have predicted when the details emerged this morning. This raises questions about what other motivations could be in play. Certainly, the "precedent thesis" is relevant (i.e. what does today's deal imply about how other trade deals may look?). The simplest way to approach it would be to conclude that tariffs will go up enough to increase inflation, but not so much as to hinder growth--both bad for bonds and for the Fed's rate cut prospects.

## MBS & Treasury Markets

UMBS 5.5	99.13	+0.02	10YR	4.376%	-0.002%	5/9/2025 6:06AM EST
----------	-------	-------	------	--------	---------	---------------------

### Negative Reprices Becoming Likely

MBS are now down 14 ticks (.44) and 10yr yields are up 10.3bps. Lenders are seeing at least a quarter point of weakness vs rate sheet print times. As such, negative reprices are becoming likely if you haven't seen them already. Some lenders will be back for a 2nd reprice.

**ALERT:** More New Lows

### Mortgage Rates Move Higher After Trade Deal

moved back up to the higher levels seen earlier this week after the official announcement of a trade deal between the U.S. and the U.K.

Most lenders actually began the day fairly close to yesterday's latest levels, but were ultimately forced to raise rates in response to weakness in the bond market.

The rationale for this market reaction can be debated. Some market watchers conclude that a trade deal is simply "good for stocks and bad for bonds" because it's economically bullish. While that sentiment CAN account for some of the movement, it's not the whole story.

Bonds (which dictate rates) have specific concerns regarding inflation, foreign demand, and issuance needs. These are high level topics that are beyond the scope of a daily mortgage rate recap, but suffice it to say "rates have a lot on their minds" when it comes to how trade policy shakes out. Unfortunately, it's sort of a no win situation in the short term. The only exception would have been a full exemption from tariffs.

In the bigger picture, today's mortgage rate increase is unremarkable--sort of average--and it leaves the rate index well below the early April highs, despite being well above the range seen during the month of March.

Rates Move Up After Stronger Economic Data

Whether you refer to it as "strong," or "not as bad as feared," this week's economic reports were better than the market was prepared for. The result is moderately higher rates. Interest rates are driven by movement in the bond market, and the bond market is always interested in economic data. Occasionally, the economic data can be boring enough or other events can be important enough to cause ...
