Complete Recap of Today's Market Activity

Jobs Report Comes in Stronger. Bonds React Logically

Market Summary: Thursday, July 3, 2025 - 1:23PM

Apart from the fact that this morning's jobs report contrasted starkly from the slew of anecdotal evidence suggesting a weaker labor market in June, the morning has proceeded almost exactly as expected. We assumed that even an on-target result was worth a bit of bond market weakness given the apparent "lead-off" induced by preceding data. The moderately stronger result (147k vs 110k f'cast) was more than enough to add some emphasis to the sell-off. Add the 0.2% drop in unemployment and it was game over. Are there some "yeah buts" in the data? Sure, but none so striking as to suggest yields should be lower instead of higher today.

Jobs Report Comes in Stronger. Bonds React Logically

Apart from the fact that this morning's jobs report contrasted starkly from the slew of anecdotal evidence suggesting a weaker labor market in June, the morning has proceeded almost exactly as expected. We assumed that even an on-target result was worth a bit of bond market weakness given the apparent "lead-off" induced by preceding data. The moderately stronger result (147k vs 110k f'cast) was more than enough to add some emphasis to the sell-off. Add the 0.2% drop in unemployment and it was game over. Are there some "yeah buts" in the data? Sure, but none so striking as to suggest yields should be lower instead of higher today.

One potential saving grace for the bond market (maybe not today, but in the next few months) is that revisions have been much more aligned with the consensus.

Rates Finally Rise Ahead of Jobs Report

have generally been falling since May 21st and have done nothing but move lower for more than 2 weeks. That winning streak finally came to an end today with the average lender moving up 0.06% for a top tier 30yr fixed quote.

While that's a moderately big jump for a single day, if we remove the past 4 days from the equation, today's rates would still be the lowest since early April. In other words, we're still in solid shape in the bigger picture.

Additionally, we've increasingly expected rates to bounce as the recent winning streak persisted. As of yesterday, it was up to 11 days and the odds of a bounce rise sharply after about 5-8 days.

Last but not least, it's also not uncommon for rates to "circle the wagons," so to speak, if they're in the midst of a sustained trend on the eve of a critical market event. Tomorrow's jobs report classifies as such an event. Along with the Inflation data coming out on July 15th, this data has the potential to firmly support or reject the notion that the Fed could cut rates as early as this month.

While we often go out of our way to remind our audience that the Fed Funds Rate doesn't dictate mortgage rates, a lot of that has to do with timing. Changes in Fed Funds Rate expectations almost always correlate quite well with mortgage rate movement, and this data could absolutely change those expectations.

As with any big ticket economic report, there's no way to know how it will fare versus the consensus ahead of time because that consensus constantly adjusts for all available info. In other words, if other reports suggest a weaker labor market, forecasters will update their forecasts and traders will take a lead-off in the corresponding direction. Bottom line: all we can know is that potential volatility is high tomorrow (Thursday) morning, for better or worse.

Rates Closing in on 8 Month Lows

After going to great lengths to explain why the Fed Funds Rate isn't the same as mortgage rates, we'll now have to discuss how the Fed nonetheless found a way to push rates lower this week. We already know the Fed held rates steady last week, and we've discussed the fact that mortgage rates wouldn't necessarily have fallen even if the Fed had cut the Fed Funds Rate. But mortgage rates definitel...
