

MARKET SUMMARY

Complete Recap of Today's Market Activity

Deceptively Strong GDP Causing Early (Possibly Unjustified) Weakness

Market Summary: Wednesday, July 30, 2025 - 3:28PM

There were two key reports at the start of trading today. The 815am ADP data was fairly forgettable, coming in at 104k vs 75k f'cast, and -23k previously. This is well within a range of outcomes that are arguably inconsequential for bonds. Subsequent trading reflected that fact. 15 minutes later, GDP came out at 3.0 vs 2.4 f'cast, and -0.5 previously. Bonds are basically trading that GDP beat, even though we disagree that they should be. Reason being: true domestic demand metrics continued to fall. Q2 was inordinately helped by the same net export component that tanked Q1 numbers. Since the bond market weakness doesn't really make sense in this light, we can also consider that core PCE prices were 0.2 higher than expected which means tomorrow's monthly PCE data runs a higher risk of coming in hotter. Either way, bonds have only erased about half of yesterday's gains so far. The Fed announcement and press conference are more than capable of reversing this move or adding to the pain.

Bonds Losing Ground During Powell Press Conference

In not so many words, bonds aren't getting the dovishness they were hoping for from Powell. MBS just gave up all of the day's rebound and are back down 5 ticks (.16) on the day and 6 ticks (.19) versus the post-FOMC highs.

10yr yields are up 5.6bps at 4.377.

Lenders who repriced for the better this afternoon could be considering negative reprices. Most any other lender was seeing similar MBS prices this morning when they set rates (thus limiting reprice implications).

UPDATE: No Major Initial Reaction to Fed Announcement

COMMENTARY: Here's What Changed in The New Fed Announcement

Today's Mortgage Rates

Mortgage Rates Moving Down Again

After three straight days at exactly the same level, average 30yr fixed rates began to move lower again on Tuesday. It should immediately be clarified that the word "began" implies a certain likelihood of continuation whereas no such likelihoods can be guaranteed when it comes to the bond/rate market. In other words, rates did indeed begin to move lower again, but they could stop moving lower as early as tomorrow.

One slight advantage in the present scenario is that the bond market improved steadily throughout the day and most mortgage lenders didn't drop their rates as much as the bond market improvement suggested. This means that the average lender could lower rates a bit more tomorrow assuming the underlying bond market stays exactly where it is right now.

Bonds could easily move either direction tomorrow morning. In addition to volatility that can occur during overnight/overseas trading, there are several big-ticket economic reports set to be released before mortgage lenders set their rates for the day. Then in the afternoon, the Fed announcement can create additional volatility.

Bottom line: today was good, lenders have a bit of a cushion from afternoon bond market gains, and tomorrow is another potentially volatile day (for better or worse).

From Snooze to Surge: Big Data Week Could Rock Mortgage Rates

Mortgage rates ended the week at exactly the same levels as last Friday on average. This isn't too surprising given the extremely light and inconsequential nature of this week's scheduled economic data. Things get highly consequential next week with the arrival of the monthly jobs report—a cornerstone of market movement that nearly always generates one of the biggest trading d...
