

# MARKET SUMMARY

Complete Recap of Today's Market Activity

## Another Weak Jobs Report. Another Bond Rally

Market Summary: Friday, September 5, 2025 - 12:12PM

It's a fairly straightforward morning with NFP coming in much weaker than expected with additional net-negative revisions to the previous 2 months. The only real caveat is that the unemployment rate suggests a more gentle softening of labor market conditions--a fact that likely accounts for 10yr yields "only" being 6-7bps lower in the first half hour of post-NFP trading. The other way to account for it is to say that bonds had already rallied from 4.3 to 4.16 in the 3 days leading up to this morning. That overall move is about the same size as the 8/1 post-NFP rally. Either way, bad news for labor market is good news for rates.

Mortgage Rates Plummet Back to Fall 2024 Levels

It's a well-known fact that the monthly jobs report is more capable of causing big reactions in rates than any other economic data. It happened last month in grand fashion, and it is happening again this morning.

Nonfarm Payrolls (NFP), which is a count of new jobs created, came in at a mere 22k for August versus a median forecast of 75k. This is actually not the biggest miss when it comes to NFP, but it's big enough to spark a reaction in the bond market.

In general, weaker jobs numbers prompt investors to buy bonds. When investors buy bonds, the price of those bonds goes up. When bond prices go up, rates go down.

Today's net effect is an average top tier 30yr fixed rate drop from 6.45% yesterday to 6.29% today. This is back in the same range as the low rates in the Fall of 2024.

# Calm Before the Storm: Rates Drift to 11-Month Lows Ahead of Critical Jobs Report

This past week was a classic placeholder for mortgage rates. With no big-ticket reports on the calendar, volatility stayed about as low as it gets. But even without fireworks, the market quietly added up small, steady improvements each day, ultimately pushing rates to their lowest levels since October 3rd, 2024. Each move was subtle. Rates never moved more than 0.02% on any given day. That...
