Complete Recap of Today's Market Activity

Light Volatility After Initial Losses

Market Summary: Monday, November 3, 2025 - 5:16PM

The first day of the new month began with some potential excitement, albeit not the good kind. A [corporate bond](#) offering from Alphabet pushed yields quickly higher just before 8am. Lackluster results in the ISM Manufacturing data helped push back in the other direction, but only briefly. The rest of the day was spent with yields drifting sideways near the AM highs, ultimately making for the weakest close since October 9th, but only modestly worse than last Thursday.

Weaker Start Despite Modest Boost From ISM Data

Bonds were moderately weaker in the overnight session with most of the selling arriving at 7:56am ET when Alphabet filed for a large offering, estimated at \$15bln. issuance puts upward pressure on rates in several ways and there's almost always an immediate pop when a new, large deal (like this morning's) is announced. As a result, 10yr yields were roughly 4bps higher at the open. We saw a small rally in response to tepid ISM manufacturing data, but it doesn't seem to be sticking.

Today's Mortgage Rates

30YR Fixed	6.34%	+0.06%	15YR Fixed	5.82%	+0.01%	11/3/2025
------------	-------	--------	------------	-------	--------	-----------

Highest Rates in Just Over 3 Weeks

Up until last week's Fed announcement, the average 30yr fixed mortgage rate was at the lowest levels in more than a year (in many cases, matching the same lows seen on September 16th--the day before the previous Fed announcement).

Although these past 2 post-Fed episodes have resulted in somewhat volatile bounces, rates are still far closer to long-term lows than they are to the summertime highs. In terms of MND's 30yr fixed index, we're currently at 6.34% versus last week's low of 6.13%. Contrast that to rates just under 7% in June and 7.25% earlier this year.

Once More With Feeling: Mortgage Rates Moved Higher After The Fed Rate Cut

Not all rates are created equal and not all rates move in the same direction for the same reasons. One of the most common reasons for rates moving in opposite directions is that the underlying bonds, loans, etc. have different terms. In other words, market demand for a 7-year loan can be quite different from a 1-day loan , depending on the day. While a typical mortgage may be ABLE to last ...
