Have Bonds Found Their Post-Fed Footing?

Market Summary: Thursday, November 6, 2025 - 6:40PM

Looked at one way, bonds have been in a moderate selling trend since Fed day. Viewed through another lens, Fed day caused an isolated lurch toward higher yields and then we were generally sideways until yesterday's econ data caused another lurch higher. The common thread in each scenario is that bonds had been unable to find a reason to rally in any meaningful way. Amid such scenarios, we wait for such rallies to restore balance to the near-term outlook. Via weak results in private label econ data, a sharp morning selling spree in stocks (and perhaps some technical support seen as early as yesterday when 10yr yields topped out at 4.16), today provided that rally.

Market Movement Recap

09:53 AM	Fairly sharp rally at 8:20am CME open with more buying as stocks sell off. MBS up 9 ticks (.28) and 10yr down 6.3bps at 4.097
01:56 PM	very flat near strongest levels. MBS still up 9 ticks (.28) and 10yr down 7.6bps at 4.084
04:18 PM	Still flat into the after hours session. MBS up 9 ticks (.28) and 10yr down 7.3bps at 4.088

New Data Sources Bring New Inspiration

The shutdown has not only placed more emphasis on the alternative data that was already in the rotation, but also fueled interest in new sources. One that you'll likely hear more about in the coming months is Revelio Labs, a company using data aggregation and modeling to synthesize its own version of nonfarm payrolls. While it's far from an exact match, the trends are similar, and Revelio's data is less volatile (much like ADP always has been). All that to say, there's no great way to justify this morning's rally in bonds without the Revelio release at 8:30am ET, which showed a decline in monthly job creation.

It would be easy to mistake today's rally as a product of an extremely high number of layoffs reported by the firm Challenger, Gray, and Christmas (aka Challenger Job Cut Report or "Challenger Layoffs"). But note that Challenger was released several hours early in the overnight session. It definitely had an impact, but bonds went right back to business as usual shortly thereafter.

Nice Little Recovery For Mortgage Rates

As of yesterday afternoon, were right in line with the highest levels in more than a month. The upward momentum was largely a product of 2 specific days: the October 29th Fed announcement and yesterday's duo of economic reports that suggested less cause for concern over the labor market and strength of the services sector.

Now today, we have different economic data telling a different story. Were it not for the government shutdown, the market may have never placed nearly as much emphasis on today's data. In fact, today is the first time that many market participants have even heard of one of the reports (a synthetic jobs report by Revelio).

Revelio's data suggested a decline in payrolls in October. Combined with separate data that showed a surge in job cuts, there was a clearly negative message for the labor market. Bad economic news helps bonds which, in turn, is good for rates. All told, today's move completely erased yesterday's damage. The average mortgage lender made it almost all the way back down to last Friday's levels.

Once More With Feeling: Mortgage Rates Moved Higher After The Fed Rate Cut

Not all rates are created equal and not all rates move in the same direction for the same reasons. One of the most common reasons for rates moving in opposite directions is that the underlying bonds, loans, etc. have different terms. In other words, market demand for a 7-year loan can be quite different from a 1-day loan , depending on the day. While a typical mortgage may be ABLE to last ...
