

MARKET SUMMARY

Complete Recap of Today's Market Activity

Inconsequential Data and Modest Movement

Market Summary: Friday, December 5, 2025 - 11:40AM

If there's one resounding theme in the bond market this week, it's that trading momentum marched to its own beat with almost zero regard for the available economic data. While this was a notable disconnect on Wednesday (little reaction to ADP/ISM), it's fairly easy to reconcile on a day like today where the PCE data is super stale (delayed release from September) and the only other report, Consumer Sentiment, rarely has an impact. In general, the past 5 days have marked a casual return to the prevailing range, thus setting the stage for a bigger break after the bigger events on the horizon (Fed day next week and jobs report the week after).

Market Movement Recap

- 09:29 AM Modestly weaker overnight but recovering a bit. MBS down 1 tick (.03) and 10yr up 1.2bps at 4.11
- 10:59 AM 10yr yields are up 3bps at 4.128. MBS are down only 3 ticks (.09) on the day.

Negative Reprices Becoming More Likely

Mini snowball selling in bonds now has 10yr yields up 4bps at 4.138 and MBS down 5 ticks (.16) on the day. Lenders who priced near 9:30am are seeing 6 ticks (.19) of weakness and are thus more likely to be considering negative reprices.

Mortgage Rates Are Actually Higher This Week

Today's a just a hair higher than yesterday's and although yesterday's rates were reasonably close to last Friday's, they were still definitely higher. That last assertion is at odds with some of the mortgage rate media coverage you may encounter today, but there's a logical reason.

Freddie Mac releases its weekly mortgage rate survey every Thursday. It consists of an average of the rates from each of the previous 5 business days (Thursday through Wednesday). Thus, by the time it is reported, it is a fairly stale indication of rate movement if there's been any reasonable amount of volatility.

In the case of the current week, Monday and Tuesday saw rates move meaningfully higher from last week. Even after yesterday's recovery, the average lender is still slightly higher than any day last week apart from Monday.

As always, keep in mind that consistent daily coverage of mortgage rates mean that qualitative words like "higher and lower" may sound more serious than they are. For context, rates haven't drifted outside a 0.25% range for the past 3 months. Over the past 2 weeks, the range has been half that.

Jobs Report and Stock Losses Help Rates Hold The Range

This week marked the return of delayed economic data from the government shutdown. Specifically, we received the important jobs report that was set to come out in early October. While this is September's data, and thus a bit stale, it was nonetheless responsible for the biggest volume spike in the bond market since the last Fed meeting. Such is the power of the jobs report relative to other econom...
