Complete Recap of Today's Market Activity

## Mostly Sideways. Volatility Elsewhere

Market Summary: Wednesday, February 4, 2026 - 12:02AM

The legend of the bond market's extreme apathy is increasingly making the rounds in financial circles. Bond issuance, inflation, and economic strength are not seen surging enough to put huge upward pressure on longer-term rates. And without a big downturn in 2 of those 3 variables, there's no major impetus for a big drop in rates. So we wait (and wait and wait) while bonds gyrate in micro-ranges. Add today to the list. It might have been more volatile if we had the econ data that was postponed due to the shutdown, but JOLTS wouldn't be enough to singlehandedly change the narrative. Stocks and commodities were volatile in contrast, but with limited correlation to bonds. The government funding bill passed the house and a reopening is assumed for Wednesday, but Friday's jobs report will nonetheless not be coming out on Friday.

### Data-Free Day Thanks to Shutdown

While not as disruptive or publicized as the most recent example, there's a partial government shutdown underway. Even if the House passes the funding legislation today, the Bureau of Labor Statistics (BLS) has already said they will not be publishing either of this week's key reports (JOLTS, which would have been today, and Friday's jobs report). This is consistent with our understanding of the way BLS works. In fact, it's not uncommon for the jobs report to come out on the 2nd Friday in March simply because there weren't enough work days in February to compile the data. To some extent, tomorrow's ADP and ISM data could serve as supporting actors. But in the meantime, bonds continue kicking around on a piece of ground in their hometown, waiting for someone or something to show them the way. 4.2-4.3 is the new 4.1-4.2.

### Mortgage Rates Drift Up to 2-Week Highs

The bad news: moved up to their highest levels in 2 weeks today.

The good news: the rate range has been very narrow during that time, so there's not too much of a difference between 2-week highs (6.20%) and lows (6.15%).

Today's move wasn't a product of anything that happened today. Rather, the culprit was the focal point of our coverage yesterday. Specifically, an economic report on the manufacturing sector was exceptionally strong yesterday.

The result was a weaker bond market and, thus, an implication for higher rates. But the report came out after most mortgage lenders had published rates for the day and the average lender didn't see quite enough weakness in bonds to justify a mid-day rate change yesterday. Instead, they simply waited until this morning to make the expected changes.

### Best Month For Home Price Gains in Over a Year, But Context Matters

This week's newsletter is all about context when it comes to economic data and market movement. One point of view may provide a clear takeaway while zooming out completely changes the picture. Let's start with an easy one. The early January mortgage rate rally led to an obvious surge in refinance applications. Taken together with the mini refi boom in September 2025, things look pretty ac...
