Complete Recap of Today's Market Activity

Afternoon Weakness in Bonds Despite Lower Oil Prices. Will CPI Matter?

Market Summary: Tuesday, March 10, 2026 - 5:16PM

Days like today are a problem for a "set it and forget it" mentality when it comes to energy prices and the bond market. On many occasions since the beginning of last week, the correlation between oil prices and bond yields has been plain to see. Additionally, oil price volatility has been the only way to explain much of the movement in bonds. Now this afternoon, bond yields broke higher despite no clear cues from oil. We are left to lean on things like a weak 3yr Treasury auction and general supply pressures surrounding a large [corporate bond](#) issued by Amazon. Tomorrow brings CPI--usually a relevant market mover, but unlikely to carry as much weight given the current backdrop.

Market Movement Recap

- 08:56 AM Weaker overnight vs Monday's late-day rally levels. Stronger vs 3pm close. 10yr at 4.124. MBS down 19bps from 5pm, but up a few bps vs 3pm.
- 09:54 AM MBS down 5 ticks (.16) on the day and 10yr up 2.5bps at 4.12
- 12:17 PM MBS down 3 ticks (.09) and 10yr up 1.6bps at 4.112
- 03:22 PM MBS down 7 ticks (.22) and 10yr up 4.6bps at 4.142

Back at Weakest Levels

MBS are back in line with the lows seen at the time of the last alert (actually, just a hair weaker). This is 9 ticks (.28) of weakness on the day and 7 ticks (.22) from intraday highs. Jumper lenders could technically justify negative reprices, but it should be noted that most lenders are only seeing about an eighth of a point of weakness since AM rate sheets.

10yr yields are up 5.7bps at 4.153 and have erased most of yesterday's recover even though oil prices remain mostly in check.

Mortgage Rates Sideways to Slightly Lower

Today's are lower when compared to yesterday's average prior to 4pm ET. Later in the afternoon, multiple lenders announced improvements as the bond market rallied in response to geopolitical headlines. If we use those later, lower rates as a baseline, today's average is roughly unchanged.

There were no major economic reports today--not that bonds have been too keen on reacting to econ data anyway. War-related headlines remain the biggest risk for potential volatility despite historically significant econ data on tap in the coming days.

Rates Rocked (Relatively) by Global Events

Last week, it seemed interest rates could do no wrong. Mortgage rates started at multi-year lows on Feb 23rd and proceeded to have a record-setting week (lowest weekly volatility for any week that began with multi-year lows). This week has been entirely different. A chart of 10yr Treasury yields allows us to see minute to minute changes in long-term rate momentum. In terms of mortgage r...
