

MARKET SUMMARY

Complete Recap of Today's Market Activity

Surprisingly Light Volatility

Market Summary: Thursday, April 2, 2026 - 8:31AM

Bonds digested several big ticket economic reports as well as a host of war-related headlines that probably would have caused a much bigger reaction a few weeks ago. But the net effect was an almost perfectly flat day by the 3pm CME close. If anything, the data caused some weakness and we can say bonds would have rallied more noticeably otherwise. The weak response is no surprise considering all 3 reports were stronger than expected. This also serves as a reminder that Friday's jobs report is still a relevant market mover despite a general focus on the war and energy prices.

MBS Down an Eighth From Highs

MBS are now down just over an eighth of a point from the mid-day highs. Lenders who repriced for the better near the time of those highs could technically justify a negative reprice, but risk is reasonably low unless we lose a bit more ground.

Mortgage Rates Steady to Slightly Lower

were little-changed on Wednesday, despite the release of several economic reports and another deluge of war-related headlines. In the slightly bigger picture, the market is trading with some sense of hope of a finite timeline for the war. Today, that meant a moderate drop in oil prices and bond yields (aka "rates").

Bonds struggled to maintain the improvement after this morning's economic reports which were broadly stronger than expected. In general, stronger econ data suggests higher rates, all else equal. In addition to stronger employment and retail sales reports, a key manufacturing report showed much higher inflation--also something that pushes rates higher.

All of the above having been said, there really wasn't a major reaction to any of this morning's scheduled events/reports. If anything, bonds and rates have been roughly sideways in a narrower-than-average range. The average mortgage lender was lower than yesterday by 0.02% on a top-tier 30yr fixed rate.

Mortgage Market Remains Transfixed by War

The Iran war continues to dominate financial markets and mortgage rates are no exception. That's no great surprise considering rates are driven by movement in the bond market. Still, the direction of the movement may be a surprise to some. All else equal, things that cause economic pain and uncertainty tend to be good for rates because they drive investors out of riskier assets like stocks and ...
