Complete Recap of Today's Market Activity

## More Losses After Blockade Extension News

Market Summary: Wednesday, April 29, 2026 - 10:07AM

Last night's key news on the war involved reports of Trump telling aides to prepare for a prolonged blockade of Iran. The free flow of oil through Hormuz is the key market mover in this war, so it's no surprise to see oil prices lurch higher in response. Bond yields followed but have managed to hold under yesterday morning's highs so far. This morning's econ data definitely isn't rushing to help with Durable goods coming in much higher than expected. Thankfully, the reaction added less than 1bp of losses in 10yr yields. MBS charts make it seem like the response there was bigger, but that had more to do with typical early-session **illiquidity** specific to MBS.

## Relatively Abrupt Selling

MBS are now down 10 ticks (.31) on the day with more than half of that seen since 9am ET. Most lenders were not yet out with rate sheets at that time, but this could be a consideration for those with the ability to lock yesterday's rates until this morning's rates come out.

10yr yields are up 5.4bps at 4.402.

The selling has been ongoing, but got noticeable boost from more headlines regarding extending the Iran blockade.

### Mortgage Rates Rise to 2-Week Highs

moved moderately higher today for the average lender, but not for any exciting reasons. Rather, the change has more to do with timing of the underlying market movement.

While it's true that mortgage rates are directly influenced by the bond market, mortgage lenders prefer to set rates once per day. From there, they will occasionally make adjustments if the bond market experiences enough volatility. The catch is that lenders are less likely to adjust rates the later it is in the afternoon and if the bond market has been changing steadily/gradually.

With all that in mind, yesterday saw a steady, gradual decline in the bond market that persisted into the late afternoon. As such, most lenders didn't go to the trouble of adjusting rates yesterday. In other words, the average lender was already planning on raising rates a bit this morning even if the bond market started the day flat. But bonds lost even more ground this morning (before lenders decided on rates for the day).

Bottom line, lenders were tasked with adjusting for 2 days of modest weakness all at once. The result is a move that is bigger than the average recent day, but not because the underlying market movement was bigger or more volatile than average.
