Complete Recap of Today's Market Activity

## MBS Fully Recover After Initial Reaction to Inflation Data

Market Summary: Thursday, May 14, 2026 - 3:46AM

There's no question that this morning's PPI data hit the bond market. The volume spike was easily higher than that seen with yesterday's CPI and the market movement left nothing to the imagination. In the big picture, a few bps of weakness in bond yields isn't that alarming, but if we consider PPI isn't usually a big deal and that yields were already pushing recent highs, things begin looking more meaningful. Despite the initial reaction, bonds found their footing after 11:30am. 10yr yields made it almost all the way back to pre-data levels and MBS fared even better--ultimately turning green around 2pm.

## New Lows For MBS

Bonds made a full recovery by 9:45am but have been selling off since then. The timing suggests retail investors changing asset allocation after hotter PPI, but could also include another round of concessionary selling ahead of the 30 year auction.

MBS are now down 5 ticks (.16) on the day and at least an eighth of a point from many lenders' rate sheet print times. This makes negative reprices a possibility for jumpier lenders.

10yr yields are up 4.3bps at 4.496.

**MBS MORNING:** PPI Hit Even Harder Than CPI, But Damage is Minimal

**ALERT:** Losing Ground After PPI Data

## Today's Mortgage Rates

30YR Fixed 6.57% +0.01%

15YR Fixed 6.07% +0.03%

5/13/2026

## Mortgage Rates Officially at 6 Week Highs

rose somewhat sharply yesterday to match the highest level since March 27th. They're just a hair higher today, thus officially at 6-week highs.

Whereas yesterday's Consumer Price Index (CPI) didn't have an obviously negative impact on rates, today's Producer Price Index (PPI) did. Both are big inflation reports. CPI is typically much more likely to cause a reaction in rates, but PPI showed a much bigger surge in inflation this morning.

Even then, the underlying bond market wasn't too much worse by the end of the day and the mortgage-specific bond market actually made a full recovery. But that recovery was too gradual and shallow for the average lender to adjust their rates today. That left our rate index 0.01% higher day over day at 6.57% for a top tier 30yr fixed.
